Senior School Examination, 2025

SUBJECT: MATHEMATICS (Q.P. CODE – 65/4/2)

General Instructions: -

1	You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully.
2	"Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its leakage to the public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in Newspaper/Website, etc. may invite action under various rules of the Board and IPC."
3	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one's own interpretation or any other consideration. The Marking Scheme should be strictly adhered to and religiously followed. However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and due marks be awarded to them. In class-XII, while evaluating the competency-based questions, please try to understand the given answer and even if reply is not from a marking scheme but correct competency is enumerated by the candidate, due marks should be awarded.
4	The Marking Scheme carries only suggested value points for the answers. These are Guidelines only and do not constitute the complete answer. The students can have their own expression and if the expression is correct, the due marks should be awarded accordingly.
5	The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. If there is any variation, the same should be zero after deliberation and discussion. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
6	Evaluators will mark (✓) wherever answer is correct. For wrong answer CROSS 'X' be marked. Evaluators will not put right (✓) while evaluating which gives the impression that the answer is correct, and no marks are awarded. This is the most common mistake which evaluators are committing.
7	If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totaled up and written in the left-hand margin and encircled. This may be followed strictly.
8	If a question does not have any parts, marks must be awarded in the left-hand margin and encircled. This may also be followed strictly.
9	If a student has attempted an extra question, answer to the question deserving more marks should be retained and the other answer scored out with a note "Extra Question" .

10	No marks to be deducted for the cumulative effect of an error. It should be penalized only once.
11	A full scale of marks (example 0 to 80/70/60/50/40/30 marks as given in Question Paper) has to be used. Please do not hesitate to award full marks if the answer deserves it.
12	Every examiner must necessarily do evaluation work for full working hours, i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
13	<p>Ensure that you do not make the following common types of errors committed by the Examiner in the past: -</p> <ul style="list-style-type: none"> • Leaving answer or part thereof unassessed in an answer book. • Giving more marks for an answer than assigned to it. • Wrong totaling of marks awarded on an answer. • Wrong transfer of marks from the inside pages of the answer book to the title page. • Wrong question wise totaling on the title page. • Wrong totaling of marks of the two columns on the title page. • Wrong grand total. • Marks in words and figures not tallying/not same. • Wrong transfer of marks from the answer book to online award list. • Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.) • Half or a part of the answer marked correct and the rest as wrong, but no marks
14	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0) Marks.
15	Any unassessed portion, non-carrying over of marks to the title page, or total error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the "Guidelines for Spot Evaluation" before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain a photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.

Q32.	<p>The relation between the height of the plant (y cm) with respect to exposure to sunlight is governed by the equation $y = 4x - \frac{1}{2}x^2$, where x is the number of days exposed to sunlight.</p> <p>(i) Find the rate of growth of the plant with respect to sunlight. 2</p> <p>(ii) In how many days will the plant attain its maximum height ? What is the maximum height ? 3</p>	
A32.	<p>(i) $y = 4x - \frac{1}{2}x^2 \Rightarrow \frac{dy}{dx} = (4 - x)$ cm/day</p> <p>(ii) For maximum height, $\frac{dy}{dx} = 0 \Rightarrow x = 4$ days</p> <p>as $\frac{d^2y}{dx^2} < 0$, number of days = 4</p> <p>Now, Maximum height = $y(4) = 16 - \frac{1}{2}(16) = 8$ cm</p>	<p style="text-align: center;">2</p> <p style="text-align: center;">2</p> <p style="text-align: center;">1</p>
Q33.	<p>If A is a 3×3 invertible matrix, show that for any scalar $k \neq 0$, $(kA)^{-1} = \frac{1}{k}A^{-1}$. Hence calculate $(3A)^{-1}$, where</p> $A = \begin{bmatrix} 2 & -1 & 1 \\ -1 & 2 & -1 \\ 1 & -1 & 2 \end{bmatrix}.$	
A33.	<p>Consider $(kA)\left(\frac{1}{k}A^{-1}\right) = k \cdot \frac{1}{k}(AA^{-1}) = 1 \cdot I = I$</p> <p>$\Rightarrow kA$ and $\frac{1}{k}A^{-1}$ are inverse of each other.</p> <p>$\therefore (kA)^{-1} = \frac{1}{k}A^{-1}$</p> <p>$\therefore (3A)^{-1} = \frac{1}{3}A^{-1}$</p> <p>Here, $A = 4 \neq 0 \therefore A^{-1}$ exists.</p> $adj A = \begin{bmatrix} 3 & 1 & -1 \\ 1 & 3 & 1 \\ -1 & 1 & 3 \end{bmatrix}$	<p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">2</p>

	$\therefore (3A)^{-1} = \frac{1}{12} \begin{bmatrix} 3 & 1 & -1 \\ 1 & 3 & 1 \\ -1 & 1 & 3 \end{bmatrix}$	$\frac{1}{2}$
Q34.	<p>(a) Evaluate :</p> $\int_0^{\pi/4} \frac{\sin x \cos x}{\cos^4 x + \sin^4 x} dx$ <p style="text-align: center;">OR</p> <p>(b) Find :</p> $\int \frac{\sqrt{x^2+1} [\log(x^2+1) - 2\log x]}{x^2} dx$	
A34.(a)	$I = \int_0^{\pi/4} \frac{\sin x \cos x}{\cos^4 x + \sin^4 x} dx$ <p>dividing numerator and denominator by $\cos^4 x$,</p> $I = \int_0^{\pi/4} \frac{\tan x \sec^2 x}{1 + \tan^4 x} dx$ <p>Put $\tan^2 x = t \Rightarrow 2 \tan x \sec^2 x dx = dt$</p> <p>when $x = 0, t = 0$; when $x = \frac{\pi}{4}, t = 1$</p> $\Rightarrow I = \frac{1}{2} \int_0^1 \frac{dt}{1+t^2}$ $= \frac{1}{2} [\tan^{-1} t]_0^1$ $= \frac{\pi}{8}$	<p>1</p> <p>1</p> <p>1½</p> <p>1</p> <p>½</p>

Q36.	<p>Some students are having a misconception while comparing decimals. For example, a student may mention that $78.56 > 78.9$ as $7856 > 789$. In order to assess this concept, a decimal comparison test was administered to the students of class VI through the following question : In the recently held Sports Day in the school, 5 students participated in a javelin throw competition. The distances to which they have thrown the javelin are shown below in the table :</p> <table border="1" data-bbox="277 1391 1121 1798"> <thead> <tr> <th>Name of student</th><th>Distance of javelin (in meters)</th></tr> </thead> <tbody> <tr> <td>Ajay</td><td>47.7</td></tr> <tr> <td>Bijoy</td><td>47.07</td></tr> <tr> <td>Kartik</td><td>43.09</td></tr> <tr> <td>Dinesh</td><td>43.9</td></tr> <tr> <td>Devesh</td><td>45.2</td></tr> </tbody> </table>	Name of student	Distance of javelin (in meters)	Ajay	47.7	Bijoy	47.07	Kartik	43.09	Dinesh	43.9	Devesh	45.2

	<p>The students were asked to identify who has thrown the javelin the farthest.</p> <p>Based on the test attempted by the students, the teacher concludes that 40% of the students have the misconception in the concept of decimal comparison and the rest do not have the misconception. 80% of the students having misconception answered Bijoy as the correct answer in the paper. 90% of the students who are identified with not having misconception, did not answer Bijoy as their answer.</p> <p>On the basis of the above information, answer the following questions :</p> <p>(i) What is the probability of a student not having misconception but still answers Bijoy in the test ? 1</p> <p>(ii) What is the probability that a randomly selected student answers Bijoy as his answer in the test ? 1</p> <p>(iii) (a) What is the probability that a student who answered as Bijoy is having misconception ? 2</p> <p style="text-align: center;">OR</p> <p>(iii) (b) What is the probability that a student who answered as Bijoy is amongst students who do not have the misconception ? 2</p>

Q37.	<p>An engineer is designing a new metro rail network in a city.</p>  <p>Initially, two metro lines, Line A and Line B, each consisting of multiple stations are designed. The track for Line A is represented by $l_1 : \frac{x-2}{3} = \frac{y+1}{-2} = \frac{z-3}{4}$, while the track for Line B is represented by $l_2 : \frac{x-1}{2} = \frac{y-3}{1} = \frac{z+2}{-3}$.</p>

<p>Q38.</p>	<p>During a heavy gaming session, the temperature of a student's laptop processor increases significantly. After the session, the processor begins to cool down, and the rate of cooling is proportional to the difference between the processor's temperature and the room temperature (25°C).
